Career Summary

Senior Backend & Infrastructure Engineer with over 5 years of experience architecting and scaling resilient systems across fintech, logistics, and e-commerce. Fluent in modern backend stacks (Node.js, Python, PHP) and capable of driving full-stack initiatives to successful deployment. Proven track record of designing high-availability APIs, automating complex CI/CD pipelines, and managing cost-effective cloud infrastructures. Adept at taking ownership of end-to-end product lifecycles, optimizing real-time data streaming, and integrating machine learning pipelines to deliver secure, high-performance solutions at scale.

Technical Skills

- **Backend & Full-Stack:** Node.js, Express.js, NestJS, TypeScript, Python, Django, FastAPI, PHP, Laravel, React.
- **Cloud, VPS & DevOps:** AWS (EC2, S3, RDS, Lambda, API Gateway), Oracle Cloud, VPS Management, Docker, Docker Compose, GitHub Actions CI/CD, Serverless Framework, CloudFormation, LocalStack.
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis.
- **System Design & Architecture:** Microservices, High Availability, Distributed Systems, Serverless Architectures, Real-time WebSockets.
- **Security & APIs:** REST, GraphQL, ORPC, OAuth2, JWT, RBAC, Treble API Monitoring.

Professional Experience

Senior Backend & Infrastructure Engineer (Freelance / Independent Projects) | Remote | 2023 - Present

- **Cloud Architecture & VPS Management:** Provisioned and managed scalable backend infrastructure across AWS, Oracle Cloud, and VPS providers, reducing monthly hosting overhead by 30% while maintaining 99.9% uptime.
- **Serverless Infrastructure:** Architected high-availability services using TypeScript, AWS Lambda, API Gateway, and DynamoDB; streamlined infrastructure as code (IaC) via CloudFormation and Serverless Framework, cutting deployment times in half.

- **E-Commerce Platform (BébeNestoria):** Architected a scalable backend using Next.js API routes, ORPC, and PostgreSQL to support 5,000+ monthly active users. Reduced cloud costs by replacing serverless SSE polling with Supabase Realtime and implemented ISR to boost product page load speeds by over 50%.
- **Analytics Real-Time Streaming (QuantCoreAI):** Refactored platform architecture, successfully migrating from REST polling to real-time WebSockets, which reduced live data streaming latency from seconds to under 50ms.
- **Fintech POS Monitoring:** Developed a Node.js/Express.js backend with MongoDB to oversee POS devices, reliably tracking over 10,000+ daily transactions and engineering secure operational reporting APIs.
- **Learning Management System (LMS):** Built a comprehensive REST API using Node.js and MongoDB to manage course structures and concurrent video delivery for 2,000+ students, implementing strict RBAC for Admin, Instructor, and Student portals.
- **Logistics Backend (Liftzor Freight):** Designed a high-throughput logistics system with RESTful APIs, Redis caching, and PostgreSQL on AWS EC2, successfully handling 50,000+ daily requests with zero data loss.
- **API Observability:** Engineered a high-performance Barcode API incorporating compression middleware and Treble to monitor error rates and trace requests, resulting in a 25% improvement in API resolution times.

Backend Engineer | Dynamics Adept Africa | Lagos, Nigeria | 2020 - 2023

- Designed and maintained APIs for logistics and payment platforms, facilitating secure and high-performance data transactions for a user base of over 25,000 active accounts.
- Optimized database queries and caching strategies using Redis and PostgreSQL, increasing system throughput by 40% and drastically lowering average response times during peak traffic events.
- Integrated third-party payment gateways and automated reconciliation workflows, driving a 15% reduction in transaction failures and payment disputes.
- Collaborated cross-functionally with product and frontend teams to iteratively ship 10+ major features while enforcing strict system scalability standards.

Education

Master of Science (M.Sc.) in Computer Science

Currently Pursuing

Bachelor of Science (B.Sc.) in Computer Science

Ekiti State University | May 2015 - December 2020

Technical Projects & Research

- **Federated Learning Prototype (June 2025):** Built a decentralized model training prototype to enable secure, privacy-preserving data classification workflows without centralizing sensitive datasets.
- **Deep Learning Pipeline (Aug 2023 - Nov 2023):** Engineered and trained a high-accuracy deep learning multi-classification model for the RSNA Abdominal Trauma Injury project.
- **E-Commerce Automation:** Developed advanced product scraping pipelines and automated attribute data preparation, saving over 20 hours of manual data entry per week for WooCommerce imports.
